SecureCentral engineers in your APAC time zone

Why IT teams across Asia Pacific standardise on Splashtop

A faster, safer and far simpler alternative to VPN, RDP and legacy remote-desktop tooling — for hybrid workers, service desks and MSPs alike.

Fast, high-fidelity sessions

Low-latency HD to 4K streaming with multi-monitor, remote sound, remote printing and drag-and-drop file transfer.

A modern VPN & RDP alternative

No exposed RDP ports and no tunnel into your network. Users reach only the devices they are entitled to.

Attended & unattended support

Join a user's screen on demand with a session code, or reach unattended workstations and servers around the clock.

Truly cross-platform

Windows, macOS, Linux, iOS, Android and Chromebook — connect from a laptop, tablet, phone or browser.

Visibility, patching & control

Autonomous Endpoint Management adds live inventory, real-time patching, software deployment and alerting.

Security you can evidence

AES-256 encrypted sessions, MFA and device authentication, SSO, role-based access, session recording and audit trails.

Built for the way APAC teams work

✓ Hybrid & remote work

Staff and contractors reach their office desktop and licensed apps from anywhere.

✓ Service desk & IT

Close tickets in minutes instead of scheduling desk visits or site travel.

✓ MSPs & managed services

Multi-tenant support and endpoint management that scale with your client base.

✓ Specialist workloads

Media and design, education labs, retail POS, healthcare, IoT and field equipment.

**SecureCentral — enterprise software, delivered with
expertise you can trust**12+ YEARS OF APAC DISTRIBUTION · PRE-SALES ·
