AUTONOMOUS ENDPOINT MANAGEMENT

SOLUTION BROCHURE · IT TEAMS

Autonomous Endpoint Management for Smarter IT Operations

Automate routine IT tasks and keep every device secure, up-to-date and compliant with real-time patching, full visibility and remote control — all from a single console.

Total Visibility

One console, every endpoint

Real-Time Patching

OS & third-party, automated

Audit-Ready

SOC 2 · ISO 27001 · HIPAA

ISO 27001

ISO/IEC CERTIFIED

Endpoint management, endpoint security and remote access consolidated into one platform — available as cloud or fully self-hosted On-Premise deployment for organisations with strict data-governance requirements.

AUTHORISED PARTNER
Asia Pacific

Presented by SecureCentral — Authorised Splashtop Partner for Asia Pacific. Licensing, deployment and in-region support.

ONE UNIFIED PLATFORM

Complete endpoint control, built into the tools your team already uses

Splashtop AEM extends your existing Splashtop console with proactive endpoint management — moving IT from a reactive break-fix model to automated, preventive operations.

The AEM overview dashboard — fleet health, patch compliance and prioritised vulnerabilities at a glance.

Centralised Visibility and Control

Oversee every endpoint from a single console. Track assets, vulnerabilities, device health and patch status across distributed environments.

Real-Time Patching and Operations

Automate OS and third-party patching, software updates, scripts and recurring maintenance so devices stay current without manual effort.

Support Employees Anywhere

Resolve issues faster with secure remote access and support for any computer or mobile device, without disrupting end-user productivity.

Compliance and Cyber Insurance

Demonstrate readiness for SOC 2, ISO 27001, HIPAA, PCI and GDPR with patch compliance, remediation history and security reporting.

Windows · macOS

Continuous vulnerability scanning

CISA KEV · CVE

Prioritised threat intelligence

24/5

Expert support by phone, chat, email

CAPABILITIES

Features that do the routine work for you

Vulnerability Detection & Patching

- ✓ Continuously scan Windows and macOS for CISA KEVs, CVEs and missing software updates
- ✓ Identify and prioritise zero-day and high-risk vulnerabilities
- ✓ Automate OS and third-party application patching
- ✓ Deploy via policy-driven workflows or on-demand actions

Automation & Endpoint Operations

- ✓ Policy-based patching with version control and update rings
- ✓ Trigger automated fixes for common recurring issues
- ✓ Schedule scripts and tasks across thousands of endpoints
- ✓ Background tools, task manager and file transfer without interrupting users

Security, Compliance & Reporting

- ✓ Enforce endpoint configuration and security policies
- ✓ Detect and remediate non-compliant endpoints automatically
- ✓ Audit-ready dashboards, asset inventory and endpoint security reports
- ✓ Extend protection with antivirus and EDR integrations
- ✓ 2FA, endpoint MFA, session audit logging and end-to-end encryption

Remote Access & Support

- ✓ Attended and unattended access to Windows, macOS, Linux, iOS and Android
- ✓ Investigate and remediate without interrupting the end user
- ✓ Reduce time-to-resolution and eliminate manual handoffs between teams

Policy-driven patch automation with update rings and scheduling.

"It allows us to move from a reactive support model to a preventive one, ensuring our endpoints are secure and our operations efficient."

Ilan S. · CTO / CIO

COMPLIANCE & CYBER INSURANCE READINESS

Patch compliance evidence, vulnerability remediation history and endpoint protection coverage reports that stand up to audits, internal reviews and insurance renewals — mapped to SOC 2, ISO/IEC 27001, HIPAA, PCI DSS and GDPR.

BUSINESS BENEFITS

Consolidated Platform

Endpoint management, endpoint security and remote access in one product.

Cost-Effective & Scalable

Cut licensing overhead while scaling across hybrid, multi-OS fleets.

Faster Time to Value

Deploy in days, not quarters — no traditional IT tool complexity.

Unmatched Service

24/5 expert support plus SecureCentral engineers in your time zone.

DEPLOYMENT OPTIONS

Splashtop On-Premise — built for organisations that answer to data governance

Where cloud is not an option, Splashtop On-Premise delivers the same endpoint management, patching and remote access capability entirely within your own perimeter. Self-hosted, fully under your control, and ideal for any organisation with data residency, sovereignty or regulatory obligations.

Your Infrastructure, Your Control

Deploy the Splashtop gateway inside your own data centre or private cloud. Sessions, credentials and endpoint data never leave infrastructure you own and operate.

Data Sovereignty by Design

Keep all session metadata and logs within your national borders — ideal where regulation or internal policy prohibits data residing offshore or in multi-tenant clouds.

Air-Gapped & Restricted Networks

Operates without dependency on external cloud services, supporting isolated OT, manufacturing, defence and research environments.

Enterprise Identity Integration

Native Active Directory / LDAP integration, SSO, granular role-based permissions and your own retention policy for session recordings and audit logs.

Ideal for

- ✓ Banking, financial services and insurance
- ✓ Government and public sector agencies
- ✓ Healthcare and medical research
- ✓ Defence, aerospace and critical infrastructure
- ✓ Manufacturing and industrial OT networks
- ✓ Legal, professional services and any organisation with strict data-governance mandates

ISO/IEC
27001
CERTIFIED

Splashtop is ISO/IEC 27001 certified

Splashtop maintains an independently audited Information Security Management System certified to the ISO/IEC 27001 international standard — verifying that security governance, risk management and operational controls are formally documented, monitored and continually improved. This sits alongside SOC 2 Type II attestation and support for HIPAA, PCI DSS, GDPR and FERPA obligations, giving security and compliance teams third-party assurance rather than vendor claims.

YOUR ASIA PACIFIC PARTNER

Regional Licensing & Commercials

Local-currency quotations, multi-year agreements and consolidated licensing across Asia Pacific entities.

Deployment & Onboarding

On-prem gateway architecture, policy design, pilot rollout and integration with your existing ITSM tooling.

Local Support & Advisory

In-region engineers for escalations, quarterly reviews and compliance-readiness guidance.
